

Flat Roofing Solutions

Whatever your flat roofing requirement, you can be confident that a Starglaze roof will provide you with a solution that looks good and provides lasting performance; performance that is independently certified to have a life expectancy in excess of 40 years*.

It's the ideal solution for problem roofs which need replacement, for example if you have a traditional felt roof which is now cracked and blistering.

Our roofing system is installed without naked flames, hot bitumen, multiple layers or resins. The surface is carefully and correctly prepared and a PVC membrane is simply secured to the roof with fixings. The membranes are permanently fused together by hot air welding joints and details. This ensures a durable and watertight finish.

There are many advantages for our flat roofing system, some of which include:

- It's BBA certified for 40 years life expectancy. In fact, it's good enough for the people who set the standards here in the UK - the British Standards Institute has this system installed on their offices!
- It looks good – the lead grey colour blends seamlessly with any home.
- It's vapour permeable – the PVC membrane breathes allowing any trapped moisture to escape rather than damaging your home.

Aesthetically pleasing and resistant to the elements, our flat roofs can be used for a variety of purposes including homes and extensions; conservatories; roof terraces and balconies; dormers and porches and garages.

* As certified by the British Board of Agrément (BBA).
